

# From missed call to paid job - without the clipboard relay.

Prepared for: [CLIENT BUSINESS] | Prepared by: [PROVIDER]

THE NARROW OUTCOME

Every service request has one owner and one next action.

A qualified request moves through approved estimate, dispatch, completion, and invoice follow-up with visible gates.

PROPOSED WORKFLOW

|    |                                                                              |                                                           |
|----|------------------------------------------------------------------------------|-----------------------------------------------------------|
| 01 | <b>Capture the service request</b><br>One qualified service-request record   | Human confirms emergency priority and service area        |
| 02 | <b>Prepare the estimate</b><br>Draft estimate ready for owner approval       | Owner approves scope, price, and exclusions before send   |
| 03 | <b>Reserve the crew window</b><br>Confirmed job window with assigned owner   | Dispatcher resolves conflicts and travel time             |
| 04 | <b>Issue the invoice draft</b><br>Invoice draft and reconciliation checklist | Office approves final total; live Stripe remains disabled |
| 05 | <b>Close the loop</b><br>Typed follow-up task with due date                  | No customer message sends from this starter               |

COMMERCIALS

| IMPLEMENTATION                                                         | MANAGED CARE                                               |
|------------------------------------------------------------------------|------------------------------------------------------------|
| <b>\$1,500 one time</b>                                                | <b>\$249 / month</b>                                       |
| Configuration, branded proposal template, test pass, and team handoff. | Monitoring, small fixes, and one monthly workflow tune-up. |

BOUNDARIES AND ACCEPTANCE

This starter does not activate live payments, send customer communications, or deploy into a production customer account. Final scope, data handling, integrations, and acceptance tests must be approved in writing before implementation.
